AQTAR SHAIK

SENIOR PERFORMANCE ENGINEER (Bengaluru | +91 9321094814 | aqtar.sk@gmail.com)

PROFESSIONAL SUMMARY

Performance Engineer with 11+ years of software testing experience, including 10+ years in performance testing and engineering for high-traffic consumer APIs, enterprise applications and cloud-native microservices. Designs workload models and the full range of performance tests (load, stress, spike, soak, volume and scalability) using JMeter, Gatling/Scala, Locust, k6 and LoadRunner, including an API workload designed for 1M requests per minute. Builds reusable performance frameworks as code in Java, Python and Scala, and runs repeatable test execution through CI/CD pipelines (Jenkins, GitHub Actions, Argo Workflows). Uses Datadog, Dynatrace, AppDynamics, Grafana, Kibana and AWS CloudWatch to correlate latency, throughput and errors with application, JVM/GC, infrastructure and database metrics, find bottlenecks and drive tuning with development, DevOps and SRE teams. Experienced in Kubernetes, AWS ECS/EKS, SQL/NoSQL databases, SLA/SLO validation, SAP performance testing and Agile delivery.

CORE & TECHNICAL SKILLS

Performance Engineering	Load/Stress/Spike/Soak, Volume & Scalability Testing, Workload Modelling, Capacity Planning, Baselines, SLA/SLO Validation, Performance Tests as Code
Performance Analysis	Latency Percentiles, Throughput, Error Rate, CPU/Memory, JVM/GC, DB Connections, Database Deadlocks, Cache Utilization, Bottleneck & Root-Cause Analysis
Performance Tools	JMeter, BlazeMeter, Gatling/Scala, Locust, k6, LoadRunner, WAPT, Postman
Monitoring / APM	Datadog, Dynatrace, AppDynamics, Grafana, Kibana, AWS CloudWatch, New Relic, JVisualVM
Cloud / CI-CD	Kubernetes, Microservices, AWS (ECS/EKS, RDS MySQL), Jenkins, GitHub Actions, Argo Workflows, ArgoCD, Git
Scripting / Data	Java, Python, Scala, REST/SOAP APIs, Dynamic Test Data, Authentication/Token Correlation, SQL/NoSQL, Redis
Delivery / Domains	Performance Reports, Test Strategy, Production Readiness, Agile/JIRA, Stakeholder Communication, SAP, Banking, Payments, Insurance, High-Traffic Consumer APIs

WORK EXPERIENCE

Legion Technologies **Mar 2026 – Present**

Senior Performance SDET

- Designed and executed API performance scenarios for a distributed Workforce Management platform covering scheduling, forecasting, timesheets, reports and dashboards.
- Developed performance tests as code in Python (Locust) with dynamic authentication, session handling, access-token correlation, realistic test data and response validation.
- Performed workload modelling, load, volume and capacity testing, and reported response time, throughput, error rate and resource utilization to engineering stakeholders.
- Integrated repeatable performance-test execution into CI/CD-oriented workflows using Jenkins, GitHub and Argo Workflows.
- Investigated application, infrastructure and database bottlenecks across AWS ECS/EKS microservices and RDS MySQL using Datadog and AWS CloudWatch, correlating latency and error trends with CPU, memory, JVM health and garbage-collection metrics.
- Partnered with backend, DevOps and SRE teams on environment readiness, test-data setup, scaling analysis, root-cause investigation and performance optimization.

Big Tree Entertainment Pvt. Ltd. (BookMyShow) **Nov 2021 – Mar 2026**

Software Development Test Engineer II

- Owned performance coverage for high-traffic consumer journeys across Discovery, Synopsis, Seat Layout, Booking, Payment, Members OTP and Resale APIs.
- Designed and executed load, stress, spike and soak tests for peak-demand scenarios such as blockbuster movie releases, major sports events and music events.
- Built reusable JMeter performance frameworks with parameterization, dynamic test-data generation, request/session correlation, cache-bypass strategies and parallel execution.

- Executed and scaled JMeter load tests on BlazeMeter, using its cloud load generation and reporting to analyse results across peak-demand test runs.
- Developed Gatling/Scala API scripts with request workflows, dynamic data, correlation and response validation.
- Designed a high-volume API workload targeting 1M requests per minute, with a 45-minute ramp-up and 45-minute study period to evaluate throughput, server behaviour, scalability and saturation points.
- Analysed average, P95/P99 latency, throughput and error rates, correlating them with CPU, memory, pod scaling, database connections and cache utilization in Grafana, Kibana and APM platforms to identify bottlenecks, capacity constraints and regressions.
- Collaborated with backend, DevOps and SRE teams on Kubernetes pod sizing, autoscaling, JVM tuning and database performance improvements.
- Prepared performance reports and RCA recommendations to support production readiness for critical releases and live events.

Indium Software (India) Ltd. **Dec 2020 – Nov 2021**

Software Test Engineer

- Performed functional, API and non-functional testing for enterprise applications across manual and automated execution.
- Worked with Agile teams on test execution, defect analysis, release validation and defect tracking.

Travelex India Pvt. Ltd. | Project: GFX **Mar 2020 – Nov 2020**

Senior Software Test Engineer / Lead Analyst

- Worked on partner-facing APIs supporting cash-to-branch and cash-to-home customer journeys, including pricing and currency-rate services.
- Developed Cucumber acceptance scenarios and JSON test data for D2C workflows; published results through JIRA.

AQM Technologies Pvt. Ltd. **Dec 2016 – Feb 2020**

Senior Software Test Engineer / Project Lead

- Led performance and functional testing across insurance and banking applications, including backend services and API-driven workflows.
- Created workload models, developed performance scripts, executed tests and analysed application and infrastructure metrics to establish baselines, identify bottlenecks and support performance tuning.

SELECTED PROJECT EXPERIENCE

Ingenium Application | Aditya Birla Sun Life Insurance
JMeter | JVisualVM | Dynatrace APM - Created workload distributions and executed 300 concurrent users across 20+ screens; analysed response times, JVM behaviour and database deadlocks.

MSTD – Maharashtra Sales Tax Department | NIIT
SAP | LoadRunner 12.55 - Created workload models and executed tests up to 1,000 users while monitoring application and system performance.

Eapp D2C Application & Adstringo Integration | Aditya Birla Sun Life Insurance
LoadRunner 12.57 | AppDynamics - Developed performance scripts for four insurance products; executed 50–500 user load tests and prepared reports.

Presales & Insta Verify Mobile Apps | Aditya Birla Sun Life Insurance
LoadRunner 12.57 | Dynatrace APM - Developed mobile performance scripts and executed 50/100 concurrent-user tests with infrastructure monitoring.

Web Services / SOAP / REST API Services | Aditya Birla Sun Life Insurance
LoadRunner 12.57 - Performed concurrent XML/JSON web-service and REST/SOAP API load tests for 50, 100 and 200 users.

Ti Plus | Arab National Bank (Riyadh on site)
LoadRunner 12.52 - Established baselines under estimated peak load; analysed CPU, memory, response time and page weight.

Kotak Wealth Management Mobile App | Kotak Mahindra Bank Limited
LoadRunner 12.53 | AppDynamics - Prepared workload models, validated scripts/test data and executed 100 users across 15 scenarios with RCA.

EDUCATION

B.Tech - Vinayaka Mission University, Tamil Nadu

TARGET ROLES

Senior Performance Engineer | Performance Engineer | Performance Engineering Lead | Performance SDET
